Application of Graphs for ML: Clustering

Background: Clustering

- What do we know about the **clustering** in general?

Background: Clustering

- What do we know about the **clustering** in general?
 - ill defined problem (different tasks → different paradigms)

Background: Clustering

- What do we know about the **clustering** in general?
 - ill defined problem (different tasks → different paradigms)
 - “I know it when I see it”

Background: Clustering

- What do we know about the **clustering** in general?
 - ill defined problem (different tasks → different paradigms)
 - “I know it when I see it”
 - **inconsistent** (wrt. Kleinberg's axioms)
 - ▶ scale-invariance, richness, consistency

Background: Clustering

- What do we know about the **clustering** in general?
 - ill defined problem (different tasks → different paradigms)
 - “I know it when I see it”
 - inconsistent (wrt. Kleinberg's axioms)
 - ▶ scale-invariance, richness, consistency
 - number of clusters k need often be known

Background: Clustering

- What do we know about the **clustering** in general?
 - ill defined problem (different tasks → different paradigms)
 - “I know it when I see it”
 - inconsistent (wrt. Kleinberg's axioms)
 - ▶ scale-invariance, richness, consistency
 - number of clusters k need often be known
 - difficult to evaluate

Background: Clustering

- What do we know about the **clustering** in general?
 - ill defined problem (different tasks → different paradigms)
 - “I know it when I see it”
 - inconsistent (wrt. Kleinberg's axioms)
 - ▶ scale-invariance, richness, consistency
 - number of clusters k need often be known
 - difficult to evaluate
- What do we know about **k -means**?

Background: Clustering

- What do we know about the **clustering** in general?
 - ill defined problem (different tasks → different paradigms)
 - “I know it when I see it”
 - inconsistent (wrt. Kleinberg's axioms)
 - ▶ scale-invariance, richness, consistency
 - number of clusters k need often be known
 - difficult to evaluate
- What do we know about **k -means**?
 - “hard” version of EM clustering

Background: Clustering

- What do we know about the **clustering** in general?
 - ill defined problem (different tasks → different paradigms)
 - “I know it when I see it”
 - inconsistent (wrt. Kleinberg's axioms)
 - ▶ scale-invariance, richness, consistency
 - number of clusters k need often be known
 - difficult to evaluate
- What do we know about **k -means**?
 - “hard” version of EM clustering
 - sensitive to initialization

Background: Clustering

- What do we know about the **clustering** in general?
 - ill defined problem (different tasks → different paradigms)
 - “I know it when I see it”
 - inconsistent (wrt. Kleinberg's axioms)
 - ▶ scale-invariance, richness, consistency
 - number of clusters k need often be known
 - difficult to evaluate
- What do we know about **k -means**?
 - “hard” version of EM clustering
 - sensitive to initialization
 - optimizes for **compactness**

Background: Clustering

- What do we know about the **clustering** in general?
 - ill defined problem (different tasks → different paradigms)
 - “I know it when I see it”
 - inconsistent (wrt. Kleinberg's axioms)
 - ▶ scale-invariance, richness, consistency
 - number of clusters k need often be known
 - difficult to evaluate
- What do we know about **k -means**?
 - “hard” version of EM clustering
 - sensitive to initialization
 - optimizes for **compactness**
 - yet: **algorithm-to-go**
